SKILLS SUMMARY

- | | |
|-----------------------------|---|
| • Backend Development | Node.js, Express.js, Microservices, Chi (Go Router), REST API Development |
| • Web Development | React, Next.js, Tailwind, MaterialUI, jQuery |
| • App Development | React Native |
| • Languages | C++, JavaScript, TypeScript, Python, Go (Golang), HTML, CSS |
| • Databases & Caching | PostgreSQL, MongoDB, MariaDB, Clickhouse, Elasticsearch, Redis |
| • Cloud Services | Docker, Linux Server Deployment, AWS (Route53, CDN, Lambda, S3, LBs) |
| • Tools & Platforms | Git, Zoho, Postman, Android Studio, VS Code, Visual Studio |
| • Messaging / Communication | gRPC, NATS |

WORK EXPERIENCE

SENIOR SOFTWARE ENGINEER | NUBEWELL NETWORKS → SECHPOINT TECHNOLOGIES JULY 2024 - Present

- Developed and maintained scalable and secure backend services using Node.js, TypeScript, gRPC, NATS, and Redis, contributing as a Full-Stack Developer and ensuring high reliability and performance of APIs.
- Improved API performance and reliability through service optimization and efficient caching strategies.
- Migrated two production services from Python to Go (Golang) to leverage high concurrency and improved performance.
- Transitioned inter-service communication from REST APIs to NATS messaging, enabling faster and more decoupled service communication.
- Integrated centralized logging and error tracking across microservices to improve monitoring and faster issue resolution.

SOFTWARE ENGINEER | LOCUS APRIL 2023

- Developed frontend features using React.js and Redux to improve user interaction and state management in the logistics platform.
- Built and integrated backend APIs using Node.js and MongoDB for handling logistics data and service operations.
- Collaborated with the engineering team to debug issues, implement new features, and improve application performance.

FULL STACK DEVELOPER | Get e ideas JUNE 2023 - FEB 2024

- Developed full-stack web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js) with Redux for state management across multiple client projects.
- Built and maintained platforms including e-commerce systems, household service booking applications, and customized product ordering platforms with design features.
- Implemented backend services with MongoDB, PostgreSQL, and Redis and handled deployment and hosting on Hostinger, ensuring reliable application performance.

FULL STACK DEVELOPER | OFFERPLANT TECHNOLOGIES MARCH 2022 - MAY 2023

- Developed responsive user interfaces using React and managed application state with Redux for web applications built on the MERN stack.
- Assisted in integrating frontend components with backend APIs built using Node.js and MongoDB, contributing to feature development and bug fixes.

PROJECTS

Sortlizer (Sorting Visualizer) – Web Application | MERN MAY 2023

- Developed an interactive web application to visualize sorting algorithms such as Bubble Sort, Merge Sort, and Quick Sort, helping users understand algorithm behavior step-by-step using React.
- Built the application using the MERN stack, implementing dynamic UI updates and algorithm execution to demonstrate real-time sorting processes.

Restaurant Management System – Desktop Application | Python, Tkinter, MYSQL FEB 2023

- Developed a desktop application using Tkinter to manage restaurant operations such as order management, billing, and menu handling.
- Implemented backend data storage using MySQL with Python for efficient data management and retrieval.

TradeBro – Algorithmic Trading Platform | Python, MERN, PostgreSQL, gRPC

- Developed an algorithmic trading platform to execute automated trading strategies, using Python for strategy execution and Node.js for backend services.
- Built the system with React for the frontend and integrated services using gRPC, with data stored in PostgreSQL and MongoDB.

EDUCATION

Lovely Professional University, Punjab, India 2019-2023

Bachelor of Technology (B.Tech) in Information Technology
